

input() IN PYTHON

01 October 2020 20:02

Definition and Usage

The `input()` function allows user input.

Syntax

```
input(prompt)
```

Parameter Values

Parameter	Description
<i>prompt</i>	A String, representing a default message before the input.

More Examples

Example

Use the prompt parameter to write a message before the input:

```
x = input('Enter your name:')  
print('Hello, ' + x)
```
